Scattering of Electromagnetic Waves: Advanced Topics

Leung Tsang, Jin Au Kong

Scattering of Electromagnetic Waves: Advanced Topics Leung Tsang, Jin Au Kong

A timely and authoritative guide to the state of the art of wave scattering

Scattering of Electromagnetic Waves offers in three volumes a complete and up-to-date treatment of wave scattering by random discrete scatterers and rough surfaces. Written by leading scientists who have made important contributions to wave scattering over three decades, this new work explains the principles, methods, and applications of this rapidly expanding, interdisciplinary field. It covers both introductory and advanced material and provides students and researchers in remote sensing as well as imaging, optics, and electromagnetic theory with a one-stop reference to a wealth of current research results. Plus, Scattering of Electromagnetic Waves contains detailed discussions of both analytical and numerical methods, including cutting-edge techniques for the recovery of earth/land parametric information.

The three volumes are entitled respectively Theories and Applications, Numerical Simulation, and Advanced Topics. In the third volume, Advanced Topics, Leung Tsang (University of Washington) and Jin Au Kong (MIT), cover:

- * Two-dimensional random rough surface scattering
- * Kirchhoff and related methods for rough surface scattering
- * Analytic theory of volume scattering based on cascading of layers
- * Analytic wave theory for medium with permittivity fluctuations
- * Multiple scattering theory for discrete scatterers
- * Quasicrystalline approximation in dense media scattering
- * Dense media scattering
- * Backscattering enhancement

From reader reviews:

Carol Frazier:

The book Scattering of Electromagnetic Waves: Advanced Topics make one feel enjoy for your spare time. You need to use to make your capable much more increase. Book can for being your best friend when you getting anxiety or having big problem with the subject. If you can make examining a book Scattering of Electromagnetic Waves: Advanced Topics for being your habit, you can get much more advantages, like add your capable, increase your knowledge about a few or all subjects. It is possible to know everything if you like open and read a reserve Scattering of Electromagnetic Waves: Advanced Topics. Kinds of book are several. It means that, science reserve or encyclopedia or others. So , how do you think about this book?

Mamie Wilson:

Book is to be different for each grade. Book for children until eventually adult are different content. As you may know that book is very important for us. The book Scattering of Electromagnetic Waves: Advanced Topics ended up being making you to know about other know-how and of course you can take more information. It doesn't matter what advantages for you. The book Scattering of Electromagnetic Waves: Advanced Topics is not only giving you much more new information but also to get your friend when you sense bored. You can spend your personal spend time to read your book. Try to make relationship while using book Scattering of Electromagnetic Waves: Advanced Topics. You never experience lose out for everything when you read some books.

Shirley Demers:

Is it anyone who having spare time after that spend it whole day by simply watching television programs or just lying down on the bed? Do you need something new? This Scattering of Electromagnetic Waves: Advanced Topics can be the respond to, oh how comes? The new book you know. You are therefore out of date, spending your free time by reading in this completely new era is common not a geek activity. So what these guides have than the others?

Cindy Johnson:

That e-book can make you to feel relax. That book Scattering of Electromagnetic Waves: Advanced Topics was bright colored and of course has pictures around. As we know that book Scattering of Electromagnetic Waves: Advanced Topics has many kinds or style. Start from kids until teens. For example Naruto or Private investigator Conan you can read and believe that you are the character on there. Therefore , not at all of book are generally make you bored, any it offers you feel happy, fun and loosen up. Try to choose the best book for you personally and try to like reading this.
