Product Engineering: Molecular Structure and Properties (Topics in Chemical Engineering) James Wei

The current chemical engineering curriculum concentrates on process: the efficient manufacturing in quantity of traditional chemical products such as ammonia and benzene. However, many chemical companies now invent and manufacture specialty products with particular properties such as pharmaceuticals, cosmetics, and electronic coatings, and their employees need to know how to design the products as well as manufacture them. James Wei, a famous chemical engineer, is writing this book to provide theories and case studies in product engineering the design of new, useful products with desired properties. The first section relates historical case studies of successful product invention and development by individuals and companies. The second part of the book describes the toolbox of molecular structure-property relations. A desired product needs to have certain properties (for example, phase transition or thermal properties) and the chemist must find or design a molecular structure with the required properties. This section will instruct chemists in the analysis of structure and property information. The third section is concerned with the next stage: product research and design. It will discuss improving the desired product by additives and blending, among other strategies. It will also cover future challenges in product engineering.

From reader reviews:

Peter Cox:

Nowadays reading books be a little more than want or need but also get a life style. This reading routine give you lot of advantages. The benefits you got of course the knowledge the particular information inside the book in which improve your knowledge and information. The details you get based on what kind of reserve you read, if you want send more knowledge just go with education books but if you want sense happy read one using theme for entertaining for example comic or novel. Typically the Product Engineering: Molecular Structure and Properties (Topics in Chemical Engineering) is kind of reserve which is giving the reader unforeseen experience.

Shirley Morales:

In this era globalization it is important to someone to get information. The information will make someone to understand the condition of the world. The healthiness of the world makes the information much easier to share. You can find a lot of references to get information example: internet, paper, book, and soon. You will see that now, a lot of publisher that print many kinds of book. The particular book that recommended to your account is Product Engineering: Molecular Structure and Properties (Topics in Chemical Engineering) this guide consist a lot of the information on the condition of this world now. This kind of book was represented how does the world has grown up. The dialect styles that writer use to explain it is easy to understand. The actual writer made some investigation when he makes this book. Honestly, that is why this book appropriate all of you.

George Conner:

In this era which is the greater particular person or who has ability in doing something more are more treasured than other. Do you want to become one among it? It is just simple method to have that. What you should do is just spending your time not very much but quite enough to enjoy a look at some books. One of several books in the top collection in your reading list is definitely Product Engineering: Molecular Structure and Properties (Topics in Chemical Engineering). This book that is certainly qualified as The Hungry Slopes can get you closer in getting precious person. By looking up and review this reserve you can get many advantages.

Kimberly Moore:

What is your hobby? Have you heard which question when you got pupils? We believe that that concern was given by teacher to their students. Many kinds of hobby, All people has different hobby. And you know that little person including reading or as looking at become their hobby. You have to know that reading is very important and also book as to be the thing. Book is important thing to provide you knowledge, except your current teacher or lecturer. You see good news or update regarding something by book. Numerous books that can you decide to try be your object. One of them is actually Product Engineering: Molecular Structure and

Properties (Topics in Chemical Engineering).
